- The mixing console should have at least 2 pre-fader AUX SENDS for independent monitor mixes, and at no time should the band overpower the vocals in monitors or FOH.
- In the event of a small stage or room, drum miking requirements can be modified at the location.
- There should be a properly grounded 110v AC power source near front stage right and both rear stage left and stage right.
- At no time should fog, pyro, or strobe flash effects be used. Colored gels, spotlights, and dynamic use of lights is acceptable. If there is time to block some scenes during soundcheck, that would be ideal. Moving/intelligent lights are acceptable if they are not intrusive.
